

doubling bus and coach transport worldwide.

Think that safe, user-friendly, green, efficient and affordable mobility for everyone is a good idea?

bus and coach: a smart move for our future!

Buses and coaches are the safest, greenest, most affordable, user-friendly and efficient way to move lots of people from here to there.

They are the **best all-in-one transport solution** for fighting climate change, improving road safety, connecting with other transport modes, supporting social inclusion and reducing congestion on roads, at minimum costs to taxpayers. They also bring **huge economic benefits to communities!**

But some people still aren't convinced. So we're **spreading the word to politicians, mass media and the public** that buses and coaches are the best solution for current and future mobility challenges, hoping that appropriate policies and incentives are put in place to **support this shift in our mobility behaviours.**
